Legionnaires' disease legislation

Water Temperature Monitoring

Legionella Control & Water Quality Management

Green Contract Services, as members of the **Legionella Control Association**, provide an independent, professional & confidential service for controlling legionella & other bacteriological growth within domestic water systems. We offer everything from free 'no obligation' advice, right through to detailed legionella risk assessment reports & legionella 'testing & monitoring' programmes.

With a wide range of experience covering all types of buildings, offices, manufacturing plant, laboratories, care homes, sports facilities & many more environments, we can quickly assess your level of risk and put in place effective control measures.

We will ensure your building and water systems are fully compliant with UK legionella L8 legislation and water regulations, applicable at our time of involvement.

Green Contract Services can also provide a chlorination service to disinfect tanks, pipework, shower heads, etc. With partner UKAS laboratories we carry out a water sampling to measure a variety of different bacteriological growths & lead content within water systems.

All results, whether legionella sampling, temperature monitoring, shower head disinfections, etc can be logged on our secure website – a free service. This enables clients to logon and see up-to-date results of all testing & monitoring carried out by our visiting service engineers. All testing & monitoring data is held for up to 2 years, please visit www.greencs.co.uk/legionella-control.html for more details.

Services provided:

- Legionella Risk Assessments
- On-site Log Books (for manual recording of results following service engineer visits)
- On-line Log Books (a free back-up service on our secure website, complete with links to all service reports)
- Detailed schematic drawings
- Chlorination of tanks, pipework, showerheads, drip trays, etc
- Legionella (Pneumophila, including serogroups and Species) & Lead water samples
- Bacteriological water samples (E. Coli, Total Coliforms, Colonies at 22 & 37°C, etc)
- Legionella & Water Regulations compliance checks
- Temperature monitoring (automated & manual systems)
